Abstract (en)
[origin: WO2006013232A1] The invention relates to a drying fabric having an independent top fabric (11) and bottom fabric (12). The top fabric is woven of longitudinal (14) and trans-verse (15) monofilament yarns. The bottom fabric is woven of longitudinal yarns (16) and transverse soft yarns (17). The soft yarns densify the structure of the bottom fabric, whereby the bottom fabric serves as a filtering layer. The top fabric made of monofilament yarns protects the bottom fabric from mechanical stress.
