Abstract (en)

[origin: WO2006015821A1] The invention relates to a lamp (1) comprising a lamp housing (2) and an adjustable emitter assembly (10). The aim of the invention is to obtain a displacement of the emitter assembly (19) that is dependent on two degrees of freedom. To achieve this, the emitter assembly (10) is retained so that it can be displaced in a displacement direction of the lamp housing (2) and the latter (2) is equipped with a pivoting guide gate (14), which allows the emitter assembly (10) to be forcibly pivoted in a reproducible manner, whilst being displaced in the displacement direction.
