Abstract (en)  
[origin: WO2006010742A2] A domestic refrigerating appliance comprising a heat-insulated inner area (3), a refrigerating machine using a thermodynamic cycle for refrigerating the inner area (3), a vacuum pump (8) and a first compartment which is separated from the inner area (3) and which can be evacuated by means of the vacuum pump (8). The vacuum pump (8) produces pressure inside the first compartment (10), said pressure being lower than the vapor pressure of water at the temperature of the compartment (10).
