Abstract (en)  
[origin: WO2006003326A1] The invention concerns a device for automatic product distribution. The invention concerns the technical field of installations provided in small, medium and large surface distribution shops and permitting a user to order and pay remotely or on the spot selected products and to collect them with his vehicle. The inventive device for automatic product distribution is fitted in a location where the products (6) of a distribution shop are available, comprises (1) means for remotely ordering a list of products, a management computer terminal (2), and one or several delivery tracks (5) for motor vehicles (10). An automatic delivery system (3) enabling boxes of orders (8) wherein are arranged ordered products to be routed from said location where the products are available to said delivery tracks, is provided with at least one automatic device for storing (4) said boxes. The invention enables products to be remotely ordered and paid for by a user and said ordered products to be collected directly near his vehicle, the ordered products being delivered without human intervention.
