Abstract (en)

[origin: WO2006012754A1] The invention relates to an automatically-triggering surge arrester arrangement (20) with a surge arrester (22), which, on exceeding a given first voltage, transforms from a non-conducting into a conducting state and returns to the non-conducting state only when a much smaller second voltage is dropped below and with a switch mechanism (26,...,31), reacting to current flow through the surge arrester (22), interrupting the current flow through the surge arrester (22) and then automatically returning to the rest condition thereof. A simple, robust and compact assembly suitable for HF applications for such a surge arrester arrangement is achieved, whereby the switch mechanism (26,...,31) reacts reversibly to the heat generated in the surge arrester (22) by the current flow.
