Abstract (en)  
[origin: WO2006013477A1] The present invention relates to a method and device for decrypting an encrypted content received through a network, comprising: - an application unit for receiving the encrypted content and an encrypted first key through the network, in which the first key is associated with encryption of the content, and a dedicated second key is associated with encryption of the first key; and - a key management unit for acquiring the dedicated second key from a storage medium, and decrypting the encrypted first key by using the dedicated second key to provide the first key for the application unit to decrypt the encrypted content.
