Abstract (en)  
[origin: EP1774949A1] The device has two massage elements (6) and two branches (3,4), where each branch carries one massage element. The branch takes one configuration when the massage elements are not engaged with the treatment region and branch takes up another configuration when the massage elements engage with the treatment region. The branches are displaced relative to each other while passing from one configuration to another configuration and returns resiliently into previous configuration when the massage elements are no longer engages with the treatment region. An independent claim is included for massage method.
