Abstract (en)
[origin: EP1775073A1] The handle has an annular head (101) equipped of an internally toothed crown (102) and integrating a sub-assembly rotating freely, and a handle (10). An actuator rotor (20) is coupled by a lower face of the annular head and a reversing control (30) which is fixed by an upper face of the annular head. A cap (60) covers a major part of the upper face of the reversing control and is connected to the actuator rotor in a rotating manner. Grease joints are associated to the actuator rotor and the reversing control.
