Abstract (en)

[origin: EP1775233A1] An outer package for groups of rolls of products, each group consisting of a plurality of rolls of products (1) wrapped and closed in a piece of plastic film (2) to form a pack (C); the outer package (3) comprises a sheet (4) of film for packaging one or more packs (C), which can be wrapped around said packs by forming a tubular wrapper with the sheet (4) by gradually folding it in such a way as to obtain a tubular shape with a pair of longitudinal edges (5, 6) and two external edges (7, 8), front (T1) and rear (T2) of the outer package (3), which can be closed on the packs (C) with relative seals (S1, S2, S3); the sheet (4) of film consists of a material with a heat conducting value (A), and at least on the edges (9) of its surface (4a) which can be placed opposite the packs (C), a zone with heat conducting properties (B) lower than the afore-mentioned value (A) and designed to allow, respectively, a seal (S1) for the pair of longitudinal edges (5, 6) overlapping one another and close to the packs (C) and relative folding of the front and rear edges (7, 8) so that each forms two folded wings (7a, 8a), which can be placed overlapping one another, and can be sealed together at end zones (S2, S3), to prevent the film (2) used for the packs (C) from being affected in the seal zones (S1, S2, S3).
