Abstract (en)
[origin: EP1775255A1] Platform, in particular associable to a telescopic arm, exhibits a variable extension along a main direction (x) and comprises a bottom plane (2) to which the main direction (x) is parallel, along a perimeter of which bottom plane (2) are arranged lateral walls (3,4,5,6) which rise above the bottom plane (2). End portions (31,41,42) of the lateral walls (3, 4) and the end portion (21) of the bottom plane (2) are rotatable between at least a retracted position, in which the end portions (31,41,42) of the lateral walls (3,4) and the end portion (21) of the bottom plane (2) define a third end wall (5) in a determined position and the platform is in a shorter configuration, and at least an extended position, in which the third end wall (5) is distanced with respect to the preceding position and the platform is in a longer configuration.
