Abstract (en)

[origin: EP1775336A2] A method for converting organic materials into gas and charcoal is described, whereby the said organic materials are subjected to heating at predefined temperatures inside a pyrolysis reactor (2); in the method according to the invention the said reactor (2) is heated by causing fumes produced by the post-combustion of at least a part of the charcoal produced therein to flow over it, which charcoal, after being removed therefrom, is partly gasified and partly post-combusted by blowing into it a comburent gas in order to cause it to generate the said fumes.
