Abstract (en)

[origin: EP1775401A2] The face plate (11) has a central opening (16) through which the pivotable hooks (19) in the opener (10) may move to engage hollow bolts in the door part only when a sliding bolt in the door part is withdrawn by an angled front (20) when the door is fully closed. Screws (15) and holes (14) assemble the three parts together.
