Abstract (en)
[origin: DE102005049330B3] The angle end rod has a removable stop profile (2) with stop section (3) to restrict the winding up of the shutter. An end rod profile (1) has a recess (6) cut into the side wall at the top to engage with an upper projection (5) on a support section (4) of the stop profile. A detent section on a vertical connecting face of the end rod profile connects with another detent section on the connecting face of the support section underneath the side wall recess for extra security. Independent claims describe end profile for angle end rod, stop profile for angle end rod and a rubber profile for an angle end rod.
