Abstract (en)  
A refrigerator (100), comprises a main body cabinet (101) having an inner cabinet comprising a storage compartment (103) and a guide rail (102) disposed in an inner side thereof, a slide rail (220) to slide on the guide rail (102), and a door assembly (210) comprising a storage container (211) which is accommodated in the storage compartment (103) and a supporting frame (212) to support the storage container (211) and to slide on the slide rail (220), the supporting frame (212) comprising a first through hole (212A) through which an air current in the storage compartment (103) passes, and the storage container (211) comprising a ventilating hole disposed in a surface thereof to correspond to the first through hole so that the air current passes therethrough. Thus, the present invention provides a refrigerator (100) which allows a door assembly (210) smoothly opened and closed.
