Abstract (en)

[origin: WO2006010746A1] Disclosed is a method for the dosed supply of clear rinsing agents to clear rinsing fluid in a rinsing container of a program-controlled dishwasher in a clear rinsing process, wherein the concentration of clear rinsing agents in the clear rinsing fluid is monitored by an optical sensor. According to said method, the wetting of the optical sensor with clear rinsing liquid is considered as a criterion for dosed supply of clear rinsing agents.
