Abstract (en)

[origin: WO2006013300A1] The invention concerns a retaining means arrangement inside a motor vehicle, comprising a safety belt (20) strap (22) connected to a winding device and provided with at least one locking bolt (23, 28) designed to co-operate with a complementary fixing means (24, 30) provided proximate a seating zone (14) of the seat (10) and including a removable device (32) for guiding the retaining strap, mounted on support rods (40) of the headrest (42) of the seat (10). The invention is characterized in that the mounting of the device (32) on the rods (40) is carried out, while the headrest (42) is in use position, according to a displacement within a plane substantially perpendicular to the direction of the rods (40).
