Abstract (en)

[origin: WO2006015798A1] The invention relates to a method for producing alkyl-aromatic compounds by reacting aromatic compounds with C₁-C₁₄ alkanes in the presence of a heterogeneous catalyst. Said catalyst can be a crystalline, microporous and/or mesoporous solid containing silicon and at least one additional element selected from the group including the transition metals and the main group metals gallium and tin and is activated by way of a reducing pretreatment. The invention also relates to a method for producing alkylaryl sulfonates by sulfonation and neutralization of the alkyl-aromatic compounds.
