Abstract (en)  
[origin: WO2006007754A1] The invention relates to a method for coating fibres and material to achieve particular properties such as water repellency, oil-repellency and/or self-cleaning. Said particular properties are achieved by means of a pre-treatment of the fibres or the material and a subsequent coating with prepolymers and nanoparticles. The prepolymers are partly substituted with hydrocarbon groups or with fluorocarbon groups. The nanoparticles themselves can have surfaces treated with hydrocarbons or fluorocarbons. The prepolymers are fixed and hardened by irradiation with light of a wavelength from UV to visible.
