Abstract (en)

[origin: WO2006015769A1] The invention relates to a door lock (1), especially comprising a panic function, provided with a door lock housing (2) having a catch (3,3') which is arranged on a front side (4) of the door lock housing (2) in such a way that it can be displaced between a withdrawn position and an inserted position in the housing (2). The inventive door lock also comprises a drive device (5) which, when actuated, enables the catch (3, 3') to be pulled back into the door lock housing (2). The catch (3, 3') is tensioned preferably by a spring (F) in the withdrawn position, and the drive device (5) comprises an electric motor (9) which is connected to the catch (3, 3') by means of a flexible connection device (6).
