Abstract (en)

[origin: WO2006015964A2] Disclosed are a delaying unit (102) and a method for delaying access to data and/or commands of a dual computer system comprising a first (100) and a second computer (101), the first and the second computer operating in a time-deferred manner. The delaying unit is configured such that the deferral in the dual computer system is compensated in at least one of the two computers when data and/or commands are accessed. Also disclosed are a method and a delaying unit for delaying access to data and/or commands of a computer system comprising error detection mechanisms. Said method and delaying unit are characterized in that the time lapsing between undelayed access to data and/or commands and the detection of an error is compensated.
