Abstract (en)

[origin: EP1777151A1] A window construction 1 is placed against a frame 3 of a ship's construction. The frame 3 has an upright 7 to which a strip 9 is welded. The window construction 1 has two parallel panes 11, 13 separated by a spacer 10, and connected together along the circumference. A main side 17 of one of the panes 11 is placed against the frame 3 near its edges 15. In this a mounting section 19 is glued to the main side 17, which is provided with a groove 21 in which clamping blocks 23 are present. These clamping blocks are provided with holes with a screw thread in which clamping bolts 25 are present. These clamping bolts can be adjusted in a direction at right angles to the main side 17 of the pane 11, in which a part 27 of the mounting block 19 is present opposite the clamping bolts 25 in the adjustment direction of the clamping bolts, so that the strip 9 of the frame is clamped between this part 27 and the clamping bolts 25.
