Abstract (en)
[origin: EP1777462A2] A door for a food cooking oven, of the type comprising a perimetric frame (11) to which two mutually opposite and facing glass panes, respectively an inner pane (12) and an outer pane (13), are rigidly coupled, delimiting an air gap (14). Hinge means (15) are associated with the perimetric frame (11) and are suitable to allow the opening and closure of the door (10). The perimetric frame (11) is constituted by two parallel tubular metallic uprights (17) connected by two parallel tubular cross-members (18). The end portions (19) of said cross-members (18) are inserted and fixed in complementarily shaped openings (20) formed in corresponding internal sides (21) of the uprights (17). The cross-members (18) are fixed to the uprights (17) by way of threaded elements (22).
