Abstract (en)
[origin: EP177716A2] The device has conducting parts (2, 3), each having a contact at its free end, and movable in a Y-direction relative to each other for separating the contacts lying close to each other in a closed condition. An arc plate (4) extends in the Y-direction and has separating distances (S1, S2). The plate has an area inclined to the Y-direction, where the sum of the distances is large when the contacts are disconnected from the closed condition.
