Abstract (en)  
[origin: WO2006015600A2] A cannula device suitable as a component in a base part of an infusion set. The cannula device comprises a housing and at least one membrane together defining at least one cavity adapted to receive a piercing member of a connector, the cannula device further comprising a cannula mounted in said housing and being in fluid communication with said at least one cavity, wherein the device can receive the piercing member of a connector from more than one direction, and the housing has such a geometry that the cannula can extend from the base part in more than one direction.
