Abstract (en)  
[origin: US2006035757A1] An exercise apparatus comprises a frame defining a front portion and at least one front wheel operably coupled with the front portion of the frame. The exercise apparatus also comprises an elevation support frame defining a front portion and a rear portion. The front portion is pivotally supported at the front portion of the frame and the rear portion operably supports at least one rear wheel. The exercise apparatus further comprises a motor coupled with the elevation support frame, the motor adapted to pivot the elevation support frame and extend the at least one rear wheel away from the frame.
