Abstract (en)

[origin: WO2006024767A1] The invention relates to a method for eliminating toxic or undesirable polyhalogenated compounds from drinks. Said method is characterised in that it comprises a step for bringing the drink into contact with an adsorbent consisting of a synthetic polymer material obtained from a mixture of aliphatic and non-aliphatic monomers. The aim of the invention is especially to eliminate halophenols and haloanisols in wine, with short periods of treatment.
