Abstract (en)
[origin: WO2005100186A1] This invention relates in general to the packing industry, and more particularly to bottle closures used for bottling high-quality alcohol products. The body (1) of the closure is made with a coating applied on its exterior surface and formed by several layers of polymeric film. One of the layers (7) has a holographic image and is placed under one or more transparent layers (6). The multilayer coating film is applied on the body (1) using the thermomechanical method. The holographic image is made continuous or discontinuous, it can contain inscripts, protective signs. The coating can be applied all over the surface or on specified parts of the body.
