Abstract (en)

[origin: WO2006020229A1] The invention provides for a system capable of interfacing with a navigation system to provide the navigation system with the capability of generation routing information from the input of data that is not recognizable by the navigation system. The system receives data unrecognizable by the navigation system, which may be associated with at least one geographic identifier. The system is further capable of using the unrecognizable data to obtain additional data associated with the at least one geographic identifier associated with the unrecognizable data. The system then provides the additional data to the navigation system in a format recognizable by the navigation system.
