Abstract (en)

[origin: WO2006018568A2] The inventive electrochemical system comprises at least one substrate, at least one electroconductive layer, at least one electrochemically active layer for reversibly inserting ions, in particular cations of H⁺, Li⁺, Na⁺, Ag⁺-type or OH anions and at least one electrolyte functionality layer, wherein the electrolyte comprises at least one substantially mineral layer which is embodied in a non-oxidised form and whose ionic conductivity is generated or amplified by incorporating nitrogenous compound(s), in particular nitrided, optionally hydrogenated or fluorinated.
