Abstract (en)

[origin: WO2006016297A1] This invention relates to a method of and a device for searching for relevant content that automatically obtains related information for a digital content item currently being rendered, played, viewed, accessed or selected on an audio/video device (e.g. a HD recorder). The obtained related information is used to automatically search for groups of a network (e.g. a P2P network) comprising said digital content item.
