Abstract (en)  
[origin: US2007249205A1] An electric angled plug-in connector ( 1 ) is provided having an insulating body that is arranged in a first angled limb ( 2 ) and that contains electric contacts. One or more electric wires extend through a second angled limb ( 3 ). The two opposing faces ( 2 a , 3 a ) of the angled limbs ( 2 , 3 ) that lie in the angled area are diagonal, essentially forming a miter and are connected to each other in an articulated or detachable manner. At least one of the angled limbs is provided with a retaining element ( 11 ) having a cavity in the form of a recess, opening ( 10 ), or undercut. The continuation of the cavity of the retaining element ( 11 ) on the other angled limb located in the closed position is provided with a seat or guide ( 12 ) that extends around an exterior of the angled limb and a coupling element ( 13 ) is mounted in the receiving element or guide ( 12 ) and in the cavity in order to fix the two angled limbs ( 2 , 3 ) to one another, thus blocking a relative motion or pivoting of the angled limbs ( 2 , 3 ) relative to one another.
