Abstract (en)

[origin: WO2006017937A1] An information monitoring and alert system is provided which registers subscribers and verifiers with a central alert system. The alert system provides an interface for the verifiers to submit queries relating to identification information. Information in this query is compared to the stored data submitted by the subscriber during registration and if a match occurs the subscriber is notified that the identification has been used for a certain purpose. The alert system only stores an encrypted value of the identification with only contact information which is preferably anonymous. Any other information is deleted after registration. The subscriber upon being alerted of the use of the identification is instructed to authorize or reject the transaction pertaining to the query.
