Abstract (en)

[origin: WO2006016330A1] A dynamic frequency reuse method and apparatus for use in P2P communication to be executed in a communication network system is proposed in the present invention, comprising steps: determining a group of candidate frequencies for use in P2P communication in a cell according to the predefined radio resource management scheme of the communication network; sending said group of candidate frequencies to a UE in the cell so that the UE can detect the strength of signals using said group of candidate frequencies, thus to determine the frequency for the UE to carry out P2P communication.
