Abstract (en)
[origin: WO2006019262A1] Provided are a wireless Internet contents access system and method using contents access numbers. The wireless Internet contents access system consists a plurality of registered clients, a registration application system including a registration application program, a wireless Internet contents access numbers registration server, a wireless Internet contents DNS server, a search application system and a mobile communication device. The wireless Internet contents access system can access wireless Internet contents to construct a stable and common system environment and improve a search speed. Furthermore, the system can construct a flexible communication network in a wired/ wireless integrated environment and improve utilization of a mobile communication device to activate the wireless Internet.
