Abstract (en)

[origin: EP1779934A1] The device has a conveying system that guides a vehicle wheel along a movement path. A movable suction tool (12) is provided in the device, where the tool comprises a suction opening. A movement device is provided for moving the suction tool such that the suction opening is adjacent to a region of a hub bore (44) of the wheel. The opening is arranged at a suction finger (19), which is movable in relation to an axis of the bore and radially opposite to the tool by a drive device.
