Abstract (en)  
[origin: EP1780363A2] The door has a door leaf (20) that is movable longitudinal to a web between closing and opening positions, and a guiding rail (30) guiding a door leaf movement, where the rail has a linearly running section. A guiding rail arrangement has a connection rail (40) that connects the end areas of the section with each other, where the section accommodates the leaf in the closing position. A drive motor (10) is operated for movement of the leaf between the opening and closing positions. The motor is attached to the connection rail using a fastening unit (60) and a supporting bracket (50). An independent claim is also included for a fastening arrangement for a door.
