Abstract (en)

[origin: EP1780405A1] A pressure transferring device comprises a stamp (6) and a sealed fluid chamber (2) which is bordered by a first membrane (4) at one side of the fluid chamber (2). A transferring element (8) is fixed to the stamp (6) at one axial end of the stamp (6) coupling the stamp (6) with the first membrane (4) of the fluid chamber (2). The transferring element (8) comprises a material which comprises a smaller Young's modulus of elasticity than the material of the first membrane (4).
