Abstract (en)
A chest freezer comprises a box-shaped body (2) having a hollow holding space (3) for the goods to be frozen that is open at the top and a door (5) that is movable between an open position and a closed position. The freezer (1) further has a lighting device (7) to illuminate the interior of the box-shaped body (2); this lighting device (7) is positioned completely at the outside of the holding space (3), both when the door (5) is in the closed position and when said door (5) is in the open position, and is placed to such a location that it illuminates the interior of the holding space (3) at least partly when the door (5) is in the open position.
