Abstract (en)

[origin: EP1780742A1] The switchgear (1) has a switching device with a switching mechanism (2). The switching device is supplied with an operating voltage. A PCB (31) is provided having an electronic component (32-34) and being electrically connected to the switching device to form a supplementary electrical circuit that receives the operating voltage as the operating voltage is being supplied to the switching device. The switching device is a relay. A housing cover is positioned over the switching device and the PCB. The PCB partially bears on the housing cover. An independent claim is included for an electronic switch.
