Abstract (en)

[origin: WO2006013194A1] The invention concerns a method for preparing a cold process granular material/bitumen combination which consists in: using at least one bitumen emulsion (EB) in aqueous phase, said emulsion further comprising at least one nonionic surfactant (TA) of alkylpolyglycoside type. Said granular material/bitumen combination can lead to various road surfacing compositions, including cold process surface coatings or bituminous mixes broadly speaking. The invention also concerns the use of such a surfactant for preparing a bituminous emulsion. The invention further concerns a bituminous emulsion.
