Abstract (en)
[origin: WO2006010540A1] An ice preparing device comprising a moulding container (1), which is open on one side, and at least one Peletier element (4) used to cool the moulding container (1). The moulding container (1) can be moved on a frame (10) between a position wherein the opening of the moulding container (1) is oriented upwards and a position wherein the opening is oriented downwards.
