Abstract (en)

[origin: WO2006013155A1] The invention relates to a device component (1) for an electrical field device. According to the invention, such a device component (1) may be comparably economically exchanged on a fault, whereby the device component (1) comprises a data interface (2), by means of which a solder-free connection to a memory module (3) may be achieved. The invention further relates to a method for the generation of a secure copy of data for a hard-wired memory module (7) of the device component (1).
