Abstract (en)

[origin: WO2006021236A1] A method for supporting a secure handover of a mobile terminal from a first network element to another network element, said method comprising: automatically determining based on the topology of said network for said first network element candidate network elements which can be expected to act as candidates for the handover from said first network element; generating a security association between said candidate network elements and said first network element to support a handover based on said security association.
