Abstract (en)
[origin: WO2006024791A1] The aim of the invention is to localise a terminal (10) when accessing an IP service (15), by means of an access network (1, 2). To this end, a method for allocating an IP address to the terminal (10) is carried out, a database (8) memorises the IP address allocated to the terminal (10) in association with a terminal or user identifier and an identifier of an access point wherein the terminal accesses the access network (1, 2), the access point being associated with localisation information, and the database transmits the localisation information associated with the identifier of the terminal or the user to the service.
