Abstract (en)

[origin: WO2006021570A1] The invention aims at providing a method for making secure access to an autonomous module determining geographical position and provided with communication means for transmitting its position. The invention provides a method for controlling access between a control module and an autonomous module comprising a locating device and a communication device, those two modules comprising a security key and an identifier, said method including the following steps: determining a control value by the control module; encrypting the set including the control value and the identifier with a security key; transmitting a message containing the encrypted set to the autonomous module and at least one command; decrypting the set and verifying the conformity between the received identifier and the one stored in the autonomous module; in case of conformity, accepting the command of the message.
