Abstract (en)

Warp yarn weaving device in a weaving loom, for selvedge formation or for leno heald weave at a cloth edge, wherein two small heald assemblies (1), integral with respective mutually parallel posts (2) having alternate and symmetrical rectilinear movement, control the position of two corresponding assemblies of said warp yarns. The motion is imparted to said posts (2) by an electric motor (3) having alternate rotational motions and apt to directly control in an alternate and symmetrical rectilinear motion a pair of driving rods (4) which are parallel to the posts (2) and connected thereto with no longitudinal play.
