Abstract (en)
[origin: EP1783269A2] A compact press arrangement (10) for handling eg paper or card material, comprises a central roller (16) with a supporting stand (32). The supporting stand is divided into a section that carries the central roller and a section outside a central band. The two sections are connected using a removable intermediate member (38). A tensioning unit is used to tension the two sections, and is hydraulically actuated. A protective wall is located outside the central band section, and a cleansing unit, eg a high-pressure member, is used to clean the band section.
