Abstract (en)

[origin: EP1783693A1] The method involves establishing radio communication using a radio communication module (118), and receiving a reference time. A time-stamped data of a tachograph (112) is recovered, where the tachograph has a date later than the reference time and prior to another reference time. The recovered time-stamped data is transferred to a data receiver (114), and the radio communication is terminated. An independent claim is also included for a method for receiving time-stamped data recorded in a tachograph.
