Abstract (en)  
[origin: WO2006021489A1] The invention relates to a vacuum cleaner comprising a housing. Said housing contains a dust collection chamber, which can be closed by a dust chamber cover comprising a strut-type grip section for carrying the vacuum cleaner. The grip section adjoins a recess of the dust chamber cover and a release element of a detent element projects into said recess. The detent element co-operates with a counter detent element of the housing in order to hold the dust chamber cover in a closed position. The aim of the invention is to provide a vacuum cleaner with an improved carrying grip and cover locking mechanism. To achieve this, the release element completely covers the recess of the dust chamber cover.
