Abstract (en)
[origin: WO2006021503A1] The invention relates to a vacuum cleaner comprising a housing, a receptacle (13) for at least one accessory, and a dust compartment which can be obturated by a dust compartment cover (7). In its position obturating the dust compartment, said cover at least partially covers the receptacle (13). The aim of the invention is to provide a receptacle for at least one accessory, which, in a position in which the dust compartment cover (7) obturates the dust compartment, is at least partially covered and at the same time allows to remove or insert the accessories even when the dust compartment cover is closed. For this purpose, the housing is configured in such a manner that an access (12) to the receptacle (13) remains when the dust compartment cover obturating the dust compartment is closed, thereby allowing to remove or insert the at least one accessory when the dust compartment cover (7) is closed.
